Supplementary Fig. S1. YAP1-TEAD1 signaling controls expression of PGC1 α in HUVE cells.

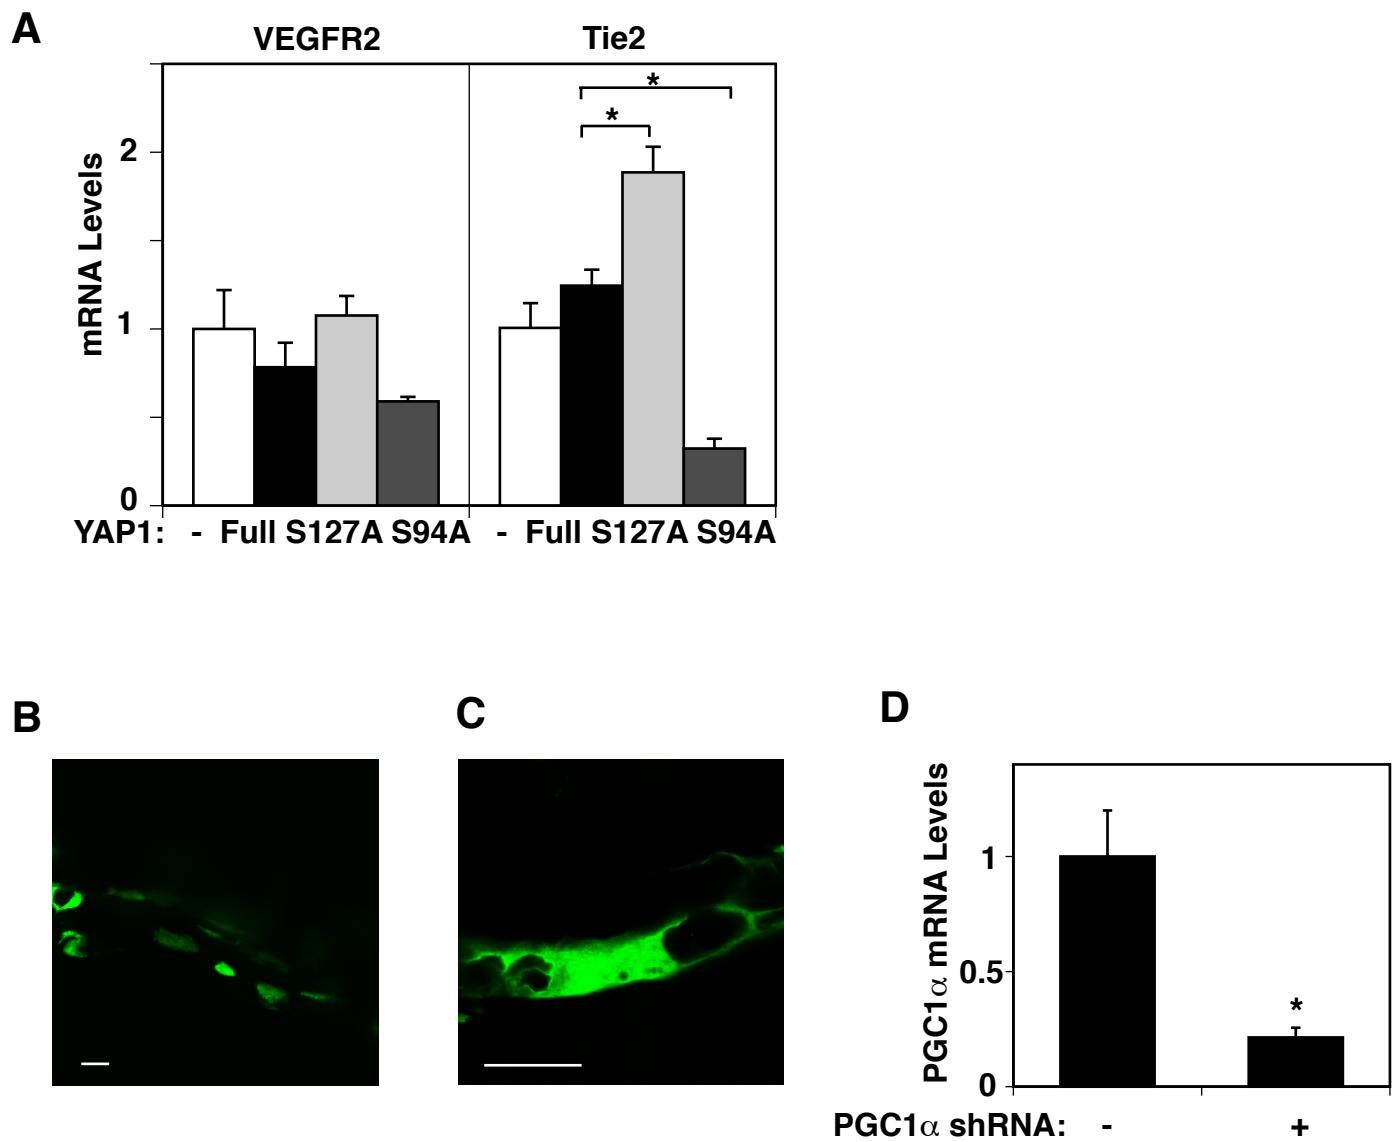

A) Immunoblots showing TEAD1, PGC1 α , and β -actin protein levels in HUVE cells treated with TEAD1 siRNA#1 or control siRNA with irrelevant sequences. **B)** Immunoblots showing PGC1 α , YAP1, and β -actin protein levels in HUVE cells treated with virus overexpressing full-length YAP1, YAP1S127A, YAP1S94A, or control vector alone (left). Graph showing YAP1 and PGC1 α protein levels normalized by β -actin protein levels in HUVE cells treated with full-length YAP1, YAP1S127A, YAP1S94A, or control vector alone (right, *, p<0.05). Error bars represent s.e.m. of three independent experiments.

Supplementary Fig. S2. YAP1-TEAD1 signaling controls mitochondrial dynamics.

A) Graph showing MFN1 and MFN2 mRNA levels in HUVE cells overexpressing full-length YAP1, YAP1S127A, or YAP1S94A (left, *, p<0.05). Graph showing MFN1 and MFN2 mRNA levels in HUVE cells treated with TEAD1 siRNA or control siRNA with irrelevant sequences (right, *, p<0.05). Error bars represent s.e.m. of three independent experiments.

B) Graph showing FIS1 and DRP1 mRNA levels in HUVE cells overexpressing full-length YAP1, YAP1S127A, or YAP1S94A (left, *, p<0.05). Graph showing FIS1 and DRP1 mRNA levels in HUVE cells treated with TEAD1 siRNA or control siRNA with irrelevant sequences (right, *, p<0.05). Error bars represent s.e.m. of three independent experiments.

Supplementary Fig. S3. YAP1-TEAD1 signaling controls expression of angiogenic factors in HUVE cells.

A) Graph showing VEGFR2 and Tie2 mRNA levels in HUVE cells treated with virus overexpressing full-length YAP1, YAP1S127A, YAP1S94A or control vector (*, p<0.05). Error bars represent s.e.m. of three independent experiments. **B)** IF micrograph of fibrin gel supplemented with GFP-labeled HUVE cells implanted on mouse lung for 1 day. Scale bar, 25 μ m. **C)** IF micrograph of GFP-labeled HUVE cells forming lumen structure in the fibrin gel implanted on mouse lung for 7 days. Scale bar, 25 μ m. **D)** Graph showing PGC1 α mRNA levels in HUVE cells treated with virus overexpressing PGC1 α shRNA or control vector (*, p<0.05). Error bars represent s.e.m. of three independent experiments.
